

Grinding Technology: A Focus Seminar "Flat grinding" 2021

Invitation

The grinding challenges in flat grinding applications are as diverse as the workpieces and the resulting products – from the slab to the finished laser part. In the new VSM Focus Seminar, our abrasives experts cover all applications.

How do you recognise the potential for optimising your application?
What surface evaluation criteria are available and when should which be used?
Which abrasive is best suited to produce a desired scratch pattern?
How do you identify possible sources of error and counteract them?

These and many other questions will be answered in the two-day seminar.
The seminar is rounded off with a comprehensive practical section with useful tips and tricks.

After the seminar ...

- ... you will be able to confidently select the right abrasives for reclamation grinding through to customer-specific grinding.
- ... you will be experienced in assessing surface quality for incoming deliveries through to shipment to the customer.
- ... you will be able to fully exploit the optimisation potential of workpiece – abrasive – machine – human being.
- ... you will have detailed expertise in applications.
- ... you can apply your newly acquired knowledge in your company with confidence.

Venue

VSM AG · Technical Center
Siegmundstraße 17 · 30165 Hanover

Date of the event:

Date	Language
05 - 06 July 2021	German*
